RED ROCK POOLS AND SPAS

Driven by passion and measured by excellence, the professionals at Red Rock Pools and Spas strive to make every project a masterpiece. Based in Phoenix but also serving affluent clients throughout the U. S. and abroad, Red Rock has established a strong reputation for bringing the most complex and challenging designs to expert fruition for homeowners demanding the truly unique.

Company owners Rick Chafey and Brett Blauvelt understand that spectacular results require frequent client communication, rigorous design discipline, rock-solid engineering, and top-shelf craftsmanship. “We take tremendous pride in designing at the highest level and degree of difficulty,” says Chafey. “Our goal is to always create truly unique projects that suit the style, setting, and scale of the property, and most important, the desires of the client.”

That uncompromising approach has

resulted in multiple prestigious design awards for Red Rock along with national media coverage on HGTV, the Travel Channel, and most recently, in a renowned trade magazine. Red Rock also enjoys the distinction as one of only 51 firms worldwide to be accredited by the prestigious Society of Watershape Designers.

For all of those accolades and honors, however, Chafey and Blauvelt are content to let their work speak for itself.

One recent example is the project shown here. This residential, contemporary, resort-style pool is massive. The goal with this project was to create an outdoor space that harmonized well with the home’s exterior. There were many technical challenges during the construction process such as the size and scope of the water walls and cantilevered decks, among other things. Over 2,000 + man hours of detailed design work and research allowed us to complete this huge project in 9 months efficiently and systematically. The dynamic design and unique features of the project create the most amazing luxury resort feel in this backyard.

Above: This dramatic water wall stands 10 feet high and spans 40 feet in length. Basalt stone lies behind the curtain of water while large slabs of limestone provide surface area for seating. The interior of pool itself is built of beadcrete, and features a swim-up bar on the far right. Designed and built by Red Rock Pools and Spas.

Left: A massive rock water feature, a tube slide, and canary palms distinguish this imaginative poolscape. Designed and built by Red Rock Pools and Spas.

Right: A great look across the 18’ wide levitating fire table gives you a spectacular view of the 3’x3’ natural Texas limestone decks and bridges.
